

COMMON SENSE

Salvatore M. Anziano

VERSION 1.0.0

SEPTEMBER 29, 2026

$$CS(h) \iff h = \text{Retain} \circ \text{Court}_x \circ \text{Defeasible} \Big[\max_I \min_D \{ h \mid \forall \sigma \in \Sigma_x : h(R) = h(\sigma(R)) \wedge \text{Preserve}_x \} \Big]$$

Common sense is the retained, reality-courted, defeasible invariant that survives lawful variation while preserving what matters.

DEFEASIBLE

Apply only when applicable and undefeated.

COURT_x

Reality decides what survives.

RETAIN

Keep only what later situations recruit by themselves.
